St. Cecilia's Public School

Maths Club Activity
Class: V
Date: 18.07.26
Organizer: Maths Club (Primary wing)
Topic: Shape Detectives

As part of the Maths Club activity for July, Class V students participated enthusiastically in "Shape Detectives." Students explored their surroundings and identified various 2D and 3D shapes in everyday objects. They observed and discussed the properties of these shapes, particularly the faces, edges and vertices of 3D shapes.

Students then prepared small creative charts showcasing the shapes they identified and their properties. The activity provided an opportunity to connect classroom learning with real-life situations and encouraged students to observe their environment from a mathematical perspective.

The activity helped develop observation, classification, spatial reasoning and creative thinking skills, while making the learning of geometry interactive and enjoyable.
