Activity: Magic in Science

Date: 31 July 2024

The students of class VIII illustrated scientific principle based activity in junior classes IV, V, VI, and VII through entertaining and magical demonstrations. Such activities spark curiosity and help in deeper understanding of scientific concepts. The students used commonly available materials to explain action and reaction forces, magnetism, synthetic indicators etc. By connecting magic tricks to their scientific explanations, this activity successfully combined entertainment and learning and inspired interest in scientific inquiry and critical thinking.
